Section 1: Safety Rules & General Information

Introduction
Thank you for purchasing a Generac PWRcell™ Inverter. The Generac PWRcell Inverter is a storage-ready inverter that connects to the Generac PV Link™ and Generac PWRcell Batteries to form the Generac PWRcell system.

This manual provides instructions for installing the Generac PWRcell Inverter, including mounting, wiring, and battery integration information. The companion document to this installation manual is the Generac PWRcell Inverter Owner’s Manual. See the owner’s manual for complete information on programming and configuring the Generac PWRcell Inverter.

The information in this manual is accurate based on products produced at the time of publication. The manufacturer reserves the right to make technical updates, corrections, and product revisions at any time without notice.

Read This Manual Thoroughly

Consult Manual. Read and understand manual completely before using product. Failure to completely understand manual and product could result in death or serious injury. (000100a)

If any section of this manual is not understood, contact the nearest Independent Authorized Service Dealer (IASD) or Generac Customer Service at 1-888-436-3722 (1-888GENERAC), or visit www.generac.com for assistance. The owner is responsible for correct maintenance and safe use of the unit.

This manual must be used in conjunction with all other supporting product documentation supplied with the product.

SAVE THESE INSTRUCTIONS for future reference. This manual contains important instructions that must be followed during placement, operation, and maintenance of the unit and its components. Always supply this manual to any individual that will use this unit, and instruct them on how to correctly start, operate, and stop the unit in case of emergency.

Safety Rules
The manufacturer cannot anticipate every possible circumstance that might involve a hazard. The alerts in this manual, and on tags and decals affixed to the unit, are not all inclusive. If using a procedure, work method, or operating technique that the manufacturer does not specifically recommend, verify that it is safe for others and does not render the equipment unsafe.

Throughout this publication, and on tags and decals affixed to the unit, DANGER, WARNING, CAUTION, and NOTE blocks are used to alert personnel to special instructions about a particular operation that may be hazardous if performed incorrectly or carelessly. Observe them carefully. Alert definitions are as follows:

DANGER
Indicates a hazardous situation which, if not avoided, will result in death or serious injury.

WARNING
Indicates a hazardous situation which, if not avoided, could result in death or serious injury.

CAUTION
Indicates a hazardous situation which, if not avoided, could result in minor or moderate injury.

NOTE: Notes contain additional information important to a procedure and will be found within the regular text of this manual.

These safety alerts cannot eliminate the hazards that they indicate. Common sense and strict compliance with the special instructions while performing the action or service are essential to preventing accidents.

How to Obtain Service
For assistance, contact the nearest Independent Authorized Service Dealer (IASD) or Generac Customer Service at 1-888-436-3722 (1-888GENERAC), or visit www.generac.com.

When contacting an IASD or Generac Customer Service, always supply the complete model and serial number of the unit as given on its data decal located on the unit. Record the model and serial numbers in the spaces provided on the front cover of this manual.
Safety Rules & General Information

General Hazards

⚠️ DANGER ⚠️
Electrocution. Do not wear jewelry while working on this equipment. Doing so will result in death or serious injury.

DANGER
Automatic start-up. Disconnect utility power and render unit inoperable before working on unit. Failure to do so will result in death or serious injury.

⚠️ WARNING ⚠️
Electrocution. Potentially lethal voltages are generated by this equipment. Render the equipment safe before attempting repairs or maintenance. Failure to do so could result in death or serious injury.

WARNING
Risk of injury. Do not operate or service this machine if not fully alert. Fatigue can impair the ability to service this equipment and could result in death or serious injury.

⚠️ WARNING ⚠️
Loss of life. This product is not intended to be used in a critical life support application. Failure to adhere to this warning could result in death or serious injury.

⚠️ WARNING ⚠️
Equipment damage. Connecting inverter to electric utility grid must only be done after receiving prior approval from utility company. Failure to do so could result in equipment or property damage.

- Connecting Generac PWRcell Inverter to the electric utility grid must only be done after receiving prior approval from the utility company.
- Only competent, qualified personnel should install, operate, and service this equipment. Strictly comply to local, state, and national electrical and building codes. When using this equipment, comply with regulations established by the National Electrical Code (NEC), CSA Standard; the Occupational Safety and Health Administration (OSHA), or the local agency for workplace health and safety.
- Protection against lightning surges in accordance with local electric codes is the responsibility of the installer.
- If working on this equipment while standing on metal or concrete, place insulative mats over a dry wood platform. Work on this equipment only while standing on such insulative mats.
- Never work on this equipment while physically or mentally fatigued.
- Any voltage measurements should be performed with a meter that meets UL3111 safety standards, and meets or exceeds overvoltage class CAT III.

⚠️ WARNING ⚠️
Equipment damage. Only qualified service personnel may install, operate, and maintain this equipment. Failure to follow proper installation requirements could result in death, serious injury, and equipment or property damage.

⚠️ WARNING ⚠️
Electric shock. Only a trained and licensed electrician should perform wiring and connections to unit. Failure to follow proper installation requirements could result in death, serious injury, and equipment or property damage.

WARNING
Equipment damage. Only qualified service personnel may install, operate, and maintain this equipment. Failure to follow proper installation requirements could result in death, serious injury, and equipment or property damage.
Electrical Hazards

**DANGER**
Electrocution. Water contact with a power source, if not avoided, will result in death or serious injury.

**DANGER**
Electrocution. PWRcell Battery front cover should be removed by a qualified technician only. Removing the front cover could result in death, serious injury, equipment or property damage.

**DANGER**
Electrocution. In the event of electrical accident, immediately shut power OFF. Use non-conductive implements to free victim from live conductor. Apply first aid and get medical help. Failure to do so will result in death or serious injury.

**DANGER**
Electrocution. Turn battery disconnect OFF and de-energize REbus before touching terminals. Failure to do so will result in death, serious injury, equipment and property damage.

**DANGER**
Electrocution. Verify electrical system is properly grounded before applying power. Failure to do so will result in death or serious injury.

---

**Safety Shutdown**

**DANGER**
Electrocution. Initiate a system-wide safety shutdown and turn PWRcell Disconnect Switch OFF on all connected batteries before performing service. Failure to do so will result in death, serious injury, equipment and property damage.

**NOTE:** A loss of grid power will not de-energize REbus in a system configured to island or provide backup power.

See **Figure 1-1.** Shutdown button (A) on the Generac PWRcell Inverter control panel activates Safety Shutdown. Safety Shutdown signals connected devices to shutdown and limit output voltage to a safe level. An external shutdown button may also be installed, given appropriate labeling.

**NOTE:** An additional remote safety shutdown may be required to be installed for local compliance.

To enter Safety Shutdown, press and hold Shutdown (A). Safety shutdown LED (B) will illuminate and LCD screen (C) will indicate Safety Shutdown has been initiated.

**Figure 1-1. Safety Shutdown Button (Located on Inverter Control Panel)**

Upon entering Safety Shutdown, a shutdown signal will be transmitted to all devices connected to REbus. In Safety Shutdown:

- Generac PWRcell Inverter will disconnect from the grid.
- Generac PWRcell Inverter will stop sourcing power to REbus, and immediately disable all sources on REbus by sending a global shutdown signal.
- All Generac PV Link optimizers will disconnect their output.
- Safety Shutdown LED (B) will be illuminated to show that the inverter has entered safety shutdown. REbus DC bus voltage will be displayed on the inverter screen.

Specifications are subject to change without notice. Refer to the product specification sheet for complete list.
Serial Number Location
Refer to Figure 2-1 to locate unit serial number (A). Record the information from this tag in Table 1: Generac PWRcell Inverter Important Information on the inside front cover of this manual. When requesting assistance you may be asked to provide this information.

About Generac PWRcell Inverters
The Generac PWRcell Inverter connects to the Generac PV Link™ and Generac PWRcell Battery to form the Generac PWRcell system for grid-interactive solar-plus-storage. Upon the loss of grid power, Generac PWRcell Inverters disconnect from the grid and provide AC power to support protected loads when configured to do so. All Generac PWRcell products use the REbus™ 380 VDC nanogrid to connect energy sources, storage, and loads. The REbus nanogrid automates the flow of power to enable plug-and-play setup and operation of Generac PWRcell equipment. For more information about REbus, visit www.generac.com.

In Figure 2-3 Generac PWRcell Inverter (E) is directly connected to Generac PV Link (B) and Generac PWRcell Battery (C) on DC (REbus) line (D). To the right of the inverter are AC lines: 120/240 VAC for grid and home loads (G), and protected loads (H) support up to 50 A.

About Generac PWRcell Inverters
The Generac PWRcell Inverter connects to the Generac PV Link™ and Generac PWRcell Battery to form the Generac PWRcell system for grid-interactive solar-plus-storage.

Upon the loss of grid power, Generac PWRcell Inverters disconnect from the grid and provide AC power to support protected loads when configured to do so. All Generac PWRcell products use the REbus™ 380 VDC nanogrid to connect energy sources, storage, and loads. The REbus nanogrid automates the flow of power to enable plug-and-play setup and operation of Generac PWRcell equipment. For more information about REbus, visit www.generac.com.

In Figure 2-3 Generac PWRcell Inverter (E) is directly connected to Generac PV Link (B) and Generac PWRcell Battery (C) on DC (REbus) line (D). To the right of the inverter are AC lines: 120/240 VAC for grid and home loads (G), and protected loads (H) support up to 50 A.
Component Locations

See Figure 2-4. Generac PWRcell is controlled through the Generac PWRcell Inverter control panel. The inverter control panel is used for adjusting system settings and for interacting with devices.

LED Indicators
See Figure 2-5 for LED locations.

REbus Status LED
REbus Status LED (C) communicates REbus nanogrid status through LED color.
- Green – all devices are functioning normally and are either generating power or ready to generate power.
- Yellow – no devices are connected or no devices are enabled.
- Red – one or more REbus device has a fault that requires attention before operation will continue.

NOTE: A red LED can also indicate a fault with the REbus nanogrid itself. See display (A) for more information about the specific fault detected.

Inverter LED
Inverter LED (D) communicates the status of the utility grid and/or inverter through LED color and state.
- Green – utility is connected and within normal operational voltage and frequency.
- Blinking green – system is in standby mode, powering up, or initializing.
- Yellow – utility grid is not within normal conditions, but user intervention typically is not required. The inverter will restart as soon as the utility grid returns to normal conditions.
- Red – a serious fault with the utility grid or inverter has been detected and user attention is required before the unit will resume operation. See display (A) for more information about the specific fault detected.
- No light – the inverter is disabled or powered off.

Safety Shutdown LED
Safety Shutdown LED (F) is illuminated when the system is in Safety Shutdown mode. Safety Shutdown may be initiated either from the Safety Shutdown button on the unit or an externally-installed shutdown switch. See Safety Shutdown.

Internet LED
Internet LED (D) is illuminated when the inverter is connected to a router and has an IP address. See Ethernet Configuration.

NOTE: A blue Internet LED does not mean that the inverter has connected with the Generac server.
This page intentionally left blank.
Section 3: Location and Compliance

Location

When installing the Generac PWRcell Inverter, consider the following:

- The unit can be installed in indoor or outdoor locations.
- The unit must be readily accessible.
- The inverter installation location must meet the working space requirements in NEC Article 110.26.

Compliance

DANGER

Loss of life. Property damage. Installation must always comply with applicable codes, standards, laws and regulations. Failure to do so will result in death or serious injury.

WARNING

Electrocution. Refer to local codes and standards for safety equipment required when working with a live electrical system. Failure to use required safety equipment could result in death or serious injury.

WARNING

Equipment damage. Only qualified service personnel may install, operate, and maintain this equipment. Failure to follow proper installation requirements could result in death, serious injury, and equipment or property damage.

Follow all instructions included in this manual and use appropriate practices for all product wiring and installation.

Note on DC Wiring and the NEC

Some electricians or installers may be unfamiliar with DC wiring in a residential setting. Note the following:

- NEC 690.31(G) for DC PV circuits in buildings
- NEC 215.12(C)(2) for correct DC wiring coloring
- NEC 210.5(C)(2) for identification of DC conductors carrying more than 50V

Always adhere to applicable codes when marking and installing DC conductors. See Table 3-1: REbus DC Wiring Coloring Convention. Mark or flag all conductors as appropriate.

- It is recommended that REbus (+) conductors NOT be green, white, gray, blue, or black.
- It is recommended REbus (-) conductors NOT be green, white, gray, or red.

Table 3-1. REbus DC Wiring Coloring Convention

<table>
<thead>
<tr>

<td>Green or bare</td>
</tr>
</tbody>
</table>

Safety Shutdown

The Generac PWRcell Inverter is equipped with a safety shutdown function to help installers comply with the rapid shutdown requirements given in Article 690.12 of the National Electrical Code.

See Safety Shutdown for information on how to initiate and exit a shutdown.

See External Safety Shutdown Switch for information on installing and using an external safety switch to initiate a safety shutdown.
Voltage and Frequency Trip Thresholds

This unit or system is provided with fixed trip limits and shall not be aggregated above 30 kW on a single point of common connection.

All Generac PWRcell Inverters are shipped from the factory in compliance with all UL1741 requirements, including IEEE1547. If your installation requires compliance to a different standard, such as UL1741SA, contact the nearest Independent Authorized Service Dealer (IASD) or Generac Customer Service at 1-888-436-3722 (1-888-GENERAC), or visit www.generac.com for assistance.

Voltage Trip Thresholds

See Table 3-2 for the default fixed voltage trip setpoints. All over voltage and under voltage trip conditions result in a 300-second restart delay time after the trip threshold has been exceeded for the listed number of cycles.

Frequency Trip Thresholds

See Table 3-2 for the default fixed frequency trip setpoints. All over frequency and under frequency trip conditions result in a 300-second restart delay time after the trip threshold has been exceeded for the listed number of cycles.

Table 3-2. Voltage Trip and Frequency Thresholds

Section 4: Installing PWRcell Inverter

Mounting the Inverter

**WARNING**

Equipment damage. Mount inverter to a strong, stable surface. Never mount to drywall, plaster, or other non-structural wall treatments. Failure to mount inverter to a strong, stable surface could result in equipment or property damage.

1. Verify mounting location adheres to the following requirements:
   - Inverter must be mounted upright on a vertical wall.
   - Mounting surface must be a strong, stable surface. Never mount to drywall, plaster or non-structural building finishes.
   - Fasteners must engage with at least two studs or other structural members.
   - Never obstruct intake or exhaust vents.
   - Never allow water to enter intake or exhaust vents.
   - See Figure 4-1. Observe all mounting clearances.

2. Verify fasteners are suitable for the mounting surface and can adequately secure the inverter to the wall. See Specifications for unit weight.

3. See Figure 4-2. Secure bracket (A) to mounting surface. Fasteners must engage at least two studs or other structural members.

   **NOTE:** Mounting slots (B) accommodate different stud spacings.

4. See Figure 4-3. Insert bracket tabs (C) into inverter body slot (D).

5. See Figure 4-4. Secure inverter to wall with two fasteners through mounting holes (E).

Section 5: Electrical Connections

Generac PWRcell Inverter Wiring Compartment

Accessing Wiring Compartment

**DANGER**
Electrocution. Initiate a system-wide safety shutdown and turn PWRcell Disconnect Switch OFF on all connected batteries before performing service. Failure to do so will result in death, serious injury, equipment and property damage.  
(000600)

**DANGER**
Electrocution. Verify all system voltages are safe before wiring. Disconnect all AC and DC sources of power before touching terminals. Failure to ensure no dangerous voltages are present on conductors and terminals before wiring will result in death or serious injury.  
(000642)

To access the wiring compartment:

1. Initiate a Safety Shutdown and allow DC voltage to drop to a safe level.
2. Power down inverter
3. Disconnect all sources of AC and DC Power.
4. See Figure 5-2. Open inverter front cover by lifting the bottom to horizontal (A) and pushing inward (B).
5. Locate wiring compartment cover (C).
6. Remove five M4X10 screws (D) and wiring compartment cover.
Knockout Dimensions and Locations

NOTE: All knockouts are combination knockouts.

See Figure 5-3 for knockout locations and Table 5-3 for available knockout sizes and quantities.

When using knockouts:

- Install reducing washers to accommodate smaller conduit sizes.
- Install rain-tight or wet locations hubs in compliance with UL514B.

Table 5-3. Combination Knockout Size and Quantity

Wiring Guidelines

*DANGER*

Electrocution. Verify all system voltages are safe before wiring. Disconnect all AC and DC sources of power before touching terminals. Failure to ensure no dangerous voltages are present on conductors and terminals before wiring will result in death or serious injury.

(000642)

*DANGER*

Electrocution. Turn battery disconnect OFF and de-energize REbus before touching terminals. Failure to do so will result in death, serious injury, equipment and property damage.

(000599)

- The inverter shall be installed in accordance with NEC Article 705.
- Proper installation techniques must be employed to restrain service loops and to separate AC, DC and isolated circuits.
- All conductors must be rated for at least 420 V.
- Always use wiring methods in accordance with National Electrical Code (ANSI/NFPA 70) or other applicable codes.
- Field terminals are for copper conductors only.
- Do not use field wiring leads smaller than 18 AWG.
- All permanently-installed conductors within the unit are sized in compliance with NEC Table 310.15(B)(16) (formerly Table 310.16).
- Torque all terminals as specified in Table 5-4.

**Table 5-4. Terminal Toques**

Grounding Bar Wiring

*WARNING*

Equipment damage. Never connect REbus conductors to ground. Connecting REbus conductors to ground could result in equipment or property damage.

(000643)

- The grounding bar provides central grounding for up to 8 conductors.
- Input and output circuits are isolated from the enclosure.
- The utility neutral conductor is not bonded to the equipment ground terminal bar within the enclosure.
- The inverter shall be installed as a non-separately derived system.
- System grounding is critical for REbus communications. Bond the inverter enclosure to the equipment grounding conductor of the normal power source power feeder. Properly bond the following equipment to the inverter equipment grounding terminal bar:
  - PV arrays
  - Generac PV Link
  - Generac PWRcell Batteries
- Torque all terminal as specified in Table 5-5.

**Table 5-5. Grounding Bar Wiring Terminal Specifications**

**DC Wiring**

**WARNING**

Equipment damage. Connect only to REbus-compatible devices to the DC bus. Never connect to any other DC power source. Connecting to other DC power sources could result in equipment damage.

(000598)

**WARNING**

Equipment damage. Do not connect PV string output directly to inverter. PV must be connected via Generac PWRcell PV Link. Connecting PV output directly to inverter could result in equipment or property damage.

(000644)

**WARNING**

Equipment damage. Do not connect raw, unregulated battery output to inverter. Connect only REbus-compatible batteries. Connecting batteries that are not REbus-compatible could result in equipment or property damage.

(000645)

**WARNING**

Equipment damage. Obey polarity markings when connecting REbus devices. Reverse-polarizing DC circuits could result in equipment or property damage.

(000646)

**WARNING**

Equipment damage. Connect only one wire to each DC wiring terminal. Doubling wires on a terminal could result in equipment or property damage.

(000647)

**NOTE:** Disable REbus before returning breakers to ON position.

- Connect all REbus devices to the REbus bidirectional DC terminals.
- Each terminal is protected by a 30 A two-pole circuit breaker.
- Breakers indicate state and may be used to disconnect DC circuits.
- Breakers disconnect both ungrounded DC conductors simultaneously.
- Torque all terminals as specified in Table 5-6.

<td>194°F 90°C</td>
<td>12 in-lb (1.35 Nm)</td>
</tr>
</tbody>
</table>

**AC Wiring**

**NOTE:** The installer is responsible for providing sufficient overcurrent protection for the AC grid wiring terminals. The conductors and overcurrent protection device shall be sized in accordance with NEC Article 705.12 for the utility power connection. All other conductors shall be sized in accordance with NEC Table 310.15(B)(16) and all other applicable NEC Articles.

- See Figure 5-4. The Generac PWRcell inverter is equipped with four AC grid connection terminals and three protected loads terminals.
- Use the top four terminals (A) for connection to the utility grid.

**NOTE:** Use L3 terminal (B) with 3-phase inverters only.

- Use the bottom three terminals (C) for protected loads output. See Protected Load.

![Figure 5-4. AC Wiring Terminals](image)

**Figure 5-4. AC Wiring Terminals**

- Torque all terminals as specified in Table 5-7.

</tr>
</tbody>
</table>
**Protected Load**

**WARNING**

Equipment damage. Never connect protected loads terminals to other sources of power, including any other inverter, the utility grid, or a generator. Doing so could result in equipment or property damage.

**WARNING**

Equipment damage. Never connect protected loads output from multiple inverters in parallel. Doing so could result in equipment or property damage.

**NOTE:** The protected loads terminals cannot provide full three-phase power.

For systems equipped with energy storage, the protected loads terminals provide power during a grid outage. See **Figure 5-5**. By default, the grid powers any protected loads connected to the inverter protected loads terminals. During a grid outage, internal relays inside the inverter isolate the AC grid connection and the inverter powers the protected loads only using PV array and battery power. This transition takes place in a fraction of a second.

**NOTE:** To create a protected loads panel, connect the circuits that require backup to a subpanel. Connect this subpanel to the protected loads terminals.

- The protected loads continuous output is 8 kW or 33.3 amps at 240V.
- The inverter can surge up to 50 A for motor starting capabilities.

![Figure 5-5. Single Inverter Backup Installation with Protected Loads Panel](image)

**NOTE:** See **Figure 5-6**. On systems that do not include battery storage but battery storage is expected in the future, install a protected loads panel during inverter installation. The protected loads panel will be fed by the grid while the system operates in Grid Tie mode.

![Figure 5-6. Configuration for Adding Batteries Later](image)
Connecting Ethernet

IMPORTANT NOTE: Generac requires all PWRcell system components to be connected to the Internet and to maintain such connection throughout the warranty period. Internet connectivity is established via the PWRcell Inverter. By installing the PWRcell Inverter and connecting it to the Internet, Customer agrees that Generac may remotely monitor the use and condition of the system and update the system's software and firmware, as necessary, without further notice. If the PWRcell system loses Internet connection for an extended period, Generac may not be able to provide important remote upgrades. In such cases, Generac may not be able to honor the full warranty.

- See Generac PWRcell Inverter Wiring Compartment for the Inverter Ethernet jack location.
- Use an appropriate cord grip or strain-relief connector when running Ethernet cable with a conduit.
- Inverters connected by a router to a DHCP network will automatically detect settings.
- For manual IP setup, see the Generac PWRcell Inverter Owner’s Manual.

NOTE: It is the installer’s responsibility to verify the Internet connection is reliable and secure. Generac recommends using a hardwired connection to provide Internet connectivity. Generac does not support using any wireless or power line carrier network devices. Use these devices at your own discretion.

Current Transformers (CTs)
Current transformers (CTs) are required to use the Self Supply mode and to enable Zero Export capability. CTs also allow the inverter to provide information on utility consumption through the Generac PWRcell Inverter control panel and the PWRview monitoring app.

Connecting Current Transformers
- See Figure 5-7. Install CTs around the main service conductors between the service meter and point of interconnection with subsequent service entrance panel/device.
- Install one current transformer per phase:
  - Install two CTs for split phase grids.
  - Install three CTs for three-phase grids.

![Figure 5-7. Connecting Current Transformers (CTs)](009997)

A PV Array
B Generac PWRcell Inverter

E AC Main Panel
F Generac PWRcell Battery
G Current transformers (CTs)
H Utility
Connecting CTs to the Inverter

- See Figure 5-8. Connect CTs to the inverter using a RJ-45 connector and Category 5 (Cat 5) Ethernet cable.
- CT input jack (H) is a double-stacked RJ-45 jack. Either the top or bottom jack may be used.

NOTE: Connect CTs to the CT input jack in the middle of the wiring compartment. Do not connect CTs to the Ethernet jack. Do not connect the Internet to the CT input jack. See Generac PWRcell Inverter Wiring Compartment for jack locations.

- See Figure 5-9. Connect CT leads to RJ-45 Breakout Adapter (M), using the wire coding shown in Table 5-8: CT Pinout.

H  CTs RJ-45 jack
I  ATS (Automatic Transfer Switch) RJ-45 jack
J  REbus Beacon USB-B
K  Authorized Generac personnel only
L  External safety shutdown switch terminals

CT Calibration

- Install CTs before powering ON the inverter.
- The inverter automatically detects and calibrates CTs when turned ON.
- Once CTs are detected and calibrated, a utility pole symbol will appear on the lower right corner of the home screen power flow diagram.
- If manual CT calibration is required, set CalOverride to 1. The CalOverride setpoint is accessible through the Mod. Settings menu via the inverter device page. See Table 5-9 for more information.
  - CT1 must be connected to Line 1.
  - CT2 must be connected to Line 2.
  - CT3 must be connected to line 3 (for three phase applications).
  - All CTs must be pointed such that positive current defined by the arrow of the CT is pointed towards the grid.

### Other Accessories

#### External Safety Shutdown Switch

**NOTE:** Select an appropriately rated, code compliant switch. Local codes may require special labeling, indicators, or other features. Requirements can vary by region, so consult a local code enforcement officer for guidance.

- If an external safety shutdown switch is required, the switch must be a closed (NC) type switch or button.
- See Figure 5-10. Connect the external safety shutdown switch to stop terminals (B).

**NOTE:** The stop terminals ship with a jumper installed. Remove this jumper before installing an external switch.

- Installation of an external switch does not disable the switch mounted on the front control panel. Either the front panel button or the external switch may be used to initiate a Safety Shutdown. However, once a shutdown has been initiated, the front control panel must be used to exit the shutdown. If a locking-type switch is installed, the system cannot exit the Safety Shutdown until the switch has been released.

#### Tech. Service Connection

Service RJ-11 jack (C) is for use authorized Generac personnel only. Never connect any device to this jack without direct instructions from Generac Technical Service.

![Figure 5-10. Accessory Ports](image)

- A REbus Beacon USB-B jack
- B External Safety Shutdown terminal
- C Authorized Generac personnel only
Section 6: Commissioning and Setup

System Configuration
The Generac PWRCell system is a flexible, highly customizable system that can be configured in a number of ways to meet customer need. Correct system configuration requires selecting the right equipment and the correct operational mode for the system. See the Generac PWRcell Inverter Owner’s Manual for information on operational modes and other user-configurable settings.

Enabling Islanding
Systems with the Generac PWRcell Battery must have the EnaIslanding setpoint set to ON to island. This setpoint is accessible through the Mod. Settings menu via the inverter device page. See the Generac PWRcell Inverter Owner’s Manual for information on accessing and adjusting the EnaIslanding setpoint.

General Information
All REbus devices are configured and controlled through the Generac PWRcell Inverter. Connected devices will appear on the LCD display.

Commissioning the System
NOTE: See the Generac PWRcell Commissioning Quick Start Guide for more information.
Commissioning consists of five steps:
1. **Inverter Power-up**
2. **Selecting an Operational Mode**
3. **Configuring Custom Grid Settings (optional)**
4. **Enabling REbus Devices**
5. **Enabling Generac Beacon**

Before powering up the system for the first time:
- Verify AC voltage is within the specified range for system configuration.
  - 240 V split-phase
  - 208 V 3-phase
- Verify all wiring terminations are tight and secure.
- Verify DC wiring field terminations are secure and polarity is correct.
- Verify DC breakers for all connected devices are turned ON.

Inverter Power-up
Turn ON the main AC breaker to power-up the inverter. See **Figure 6-1**. On power-up, the home screen will appear on the control panel LCD with the operational mode listed at the top of the home screen.

![Figure 6-1. Inverter Power-Up](image)

NOTE: If there is no grid power at the site and the system includes Generac PWRcell Battery, blackstart can be used to start the system from the battery. See the Generac PWRcell Owner’s manual for information on black-starting a system.

Selecting an Operational Mode
NOTE: See the Generac PWRcell Inverter Owner’s Manual for more information on operational mode options.

To select an operational mode:
1. See **Figure 6-2**. While viewing the home screen press the center button.

![Figure 6-2. Selecting Operational Modes (1 of 4)](image)
2. See Figure 6-3. A list of operational modes will be displayed with the current mode marked with an asterisk.

**NOTE:** The list of modes may not include all those shown in Figure 6-3.

3. See Figure 6-4. Use the up and down arrows to highlight the desired mode and press the center button to select.

4. Arrow right and press the center button to select Confirm.

5. See Figure 6-5. Verify the mode listed at the top of the home screen is the desired mode.

---

**Configuring Custom Grid Settings (optional)**

By default, all Generac PWRcell Inverters ship in compliance with UL1741, including IEEE1547. If the system needs to be configured to comply with a different grid interconnection standard, activate the new configuration before proceeding.

---

**Enabling REbus Devices**

**DANGER**

Electrocution. Never enable any device during an installation or while wires are exposed. Doing so could result in death, serious injury, equipment or property damage.

**NOTE:** All Generac PWRcell devices are enabled and configured individually through the Generac PWRcell Inverter control panel.

Following installation, the inverter must be enabled before all other REbus devices.

To enable the inverter:

1. See Figure 6-6. Use the right arrow key to scroll the inverter device page.

2. Verify inverter status reads disabled.

3. Press the center button.

4. See Figure 6-7. Highlight Enable and press the center button.
5. See Figure 6-8. Arrow right and press center button to Confirm.

![Figure 6-8. Enabling Inverter (3 of 4) 010017](image1)

6. See Figure 6-9. The inverter is enabled. It will create voltage at the DC terminals and begin communicating over REbus.

**NOTE:** Per UL1741, the Generac PWRcell Inverter may wait five minutes or longer before beginning to export power after the inverter has been enabled.

![Figure 6-9. Inverter Enabled (4 of 4) 010013](image2)

7. Enable all other Rebus devices connected to the system by repeating steps 1-5 for each device.

**NOTE:** If the system includes battery storage, islanding must be enabled to allow the inverter to provide power during grid outages. See *Enabling Islanding* for more information.

**Generac REbus Beacon Setup**

Generac REbus Beacon allows the Generac PWRcell system to manage energy production and storage over the course of the day. This is called Time of Use (TOU) energy management. To take advantage of this functionality, Generac PWRcell must include a Generac PWRcell battery and a reliable connection to the Internet via an Ethernet connection to a router. See *Ethernet Setup* for more information.

**Configuring and Running a TOU Schedule**

1. See Figure 6-10. Navigate to the Generac Beacon device page and press the center button to enter the device menu.

![Figure 6-10. Configuring TOU Schedule (1 of 4) 010109](image3)

2. See Figure 6-11. Use the up and down arrows to highlight Mod. Settings and press the center button to enter the settings menu.

![Figure 6-11. Configuring TOU Schedule (2 of 4) 010110](image4)

3. See Figure 6-12. Use the up and down arrows to highlight Access Code and press the center button to select.

4. Use the up and down arrows to set the Access Code to 57, and press the center button.

**NOTE:** The access code is valid for five minutes. After five minutes, the access code must be entered again to enable changes.

![Figure 6-12. Configuring TOU Schedule (3 of 4) 010111](image5)
5. Use the up and down arrows to highlight TOU Schedule and press the center button to select.

6. Use the up and down arrows to adjust the TOU Schedule. Once the desired value is set, press the center button to exit edit mode.

**NOTE:** See the latest Time of Use Program Guide for current TOU schedule values. The program guide is available at [www.generac.com](http://www.generac.com).

7. Set the Time Zone to the desired location based on **Table 1: Time Zone Codes**. Once the desired value is set, press the center button to exit edit mode.

<table>
<thead>
<tr>
<th>Time Zone</th>
<th>Units</th>
</tr>
</thead>
<tbody>
<tr>
<td>UTC</td>
<td>0</td>
</tr>
<tr>
<td>US/Eastern</td>
<td>1</td>
</tr>
<tr>
<td>US/Central</td>
<td>2</td>
</tr>
<tr>
<td>US/Mountain</td>
<td>3</td>
</tr>
<tr>
<td>US/Pacific</td>
<td>4</td>
</tr>
<tr>
<td>US/Alaska</td>
<td>5</td>
</tr>
<tr>
<td>US/Hawaii</td>
<td>6</td>
</tr>
</tbody>
</table>

8. See **Figure 6-13**. To commit changes to all entries, highlight Commit. Press the center button, then use the arrows and center button to confirm the choice.

See **Figure 6-14** and **Figure 6-15**. When enabled, the LCD will alternate between a TOU Scheduler Running Screen and a Current Operational Mode screen. Both screens will display the time until the next system change and the mode the system will change to. The TOU Schedule name will be listed at the bottom of the device page.

See **Figure 6-16** and **Figure 6-17**. On the home page, the text above the power flow diagram will alternate between Scheduler Active and the current operational mode.
Disabling Generac Beacon

The scheduler can be disabled at any time. To disable the scheduler:

1. See Figure 6-18. Navigate to the Generac Beacon device page and press the center button to enter the device menu.

2. Highlight Disable and press the center button.

3. See Figure 6-19. Arrow sideways to Confirm and press the center button.

4. See Figure 6-20. The status line on the Generac Beacon device page will read Disabled.

NOTE: The system will remain in the current operational mode until the mode is changed manually or the scheduler is re-enabled.

Enabling Generac Beacon

Once the TOU Schedule is set, the scheduler will automatically enable itself and begin running. However, if the scheduler has been disabled for any reason, the scheduler must be enabled to run. To enable the scheduler:

1. See Figure 6-18. Navigate to the Generac Beacon device page and press the center button to enter the device menu.

2. Highlight Disable and press the center button.

3. See Figure 6-19. Arrow sideways to Confirm and press the center button.

Temporarily Overriding the TOU Scheduler

The scheduler can be temporarily overridden at any time without disabling it. The manual override will apply until the next regularly scheduled operational mode change.

To temporarily override the scheduler:

1. Navigate to the system home page.
2. Press the center button.
3. Select the desired temporary operational mode.

NOTE: See the Generac PWRcell Inverter Owner’s Manual for more information.
When the scheduler has been overridden:

- Temporary Override will display on the home page, alternating with the words Scheduler Active and the name of the current operational mode.
- See Figure 6-23. Running, Overridden will display on the Generac Beacon device page.

**Figure 6-23. Overriding Scheduler**

- The countdown timer on the Generac Beacon device page will indicate the remaining time until the next mode change.

After the next scheduled mode change, the scheduler will resume normal operation.

**Disabling the TOU Scheduler in Anticipation of a Grid Outage**

In the event of an impending storm and potential outage, top off the battery by disabling the scheduler and switching the operational mode to any of the backup modes.

To disable the TOU Scheduler:

1. Navigate to the Generac Beacon device page and disable the scheduler. See **Disabling Generac Beacon** for more information.
2. Navigate to the system home page and change the operational mode to a backup-only mode, such as Priority Backup or Clean Backup. See the Generac PWRcell Inverter Owner’s Manual for more information on operational modes.
3. Once the emergency has passed, re-enable the scheduler. See **Enabling Generac Beacon** for more information.

**NOTE:** If Priority Backup mode is not listed with the other operational modes, the system installer may have removed the mode to comply with utility rules. Some utilities do not permit grid battery charging.

### Commissioning Generac Beacon

**NOTE:** Follow all commissioning procedures for the Generac PWRcell Inverter and all connected REbus devices before commissioning the Generac Beacon. See **Commissioning the System** and **Enabling REbus Devices** for more information.

To commission the Generac Beacon:

1. Verify the control panel includes a Generac Beacon device page.
2. Verify the blue Internet LED on the front of the inverter is illuminated.
3. Enable all REbus devices.

**NOTE:** If necessary, turn ON the DC breakers for each connected REbus device.

4. Enable the inverter.
5. Enable each device. See **Enabling REbus Devices** for more information.
6. Turn the Battery Disconnect switch ON for each Generac PWRcell battery.
7. Return to the Beacon device page and enter the settings menu to access all settings, including the TOU schedule and time zone.

Generac Beacon will automatically enable and begin running the TOU schedule.

### Ethernet Setup

1. Connect an Ethernet cable with a valid Internet connection into the inverter Ethernet port.
2. See **Figure 6-24**. Use the control panel left arrow buttons to scroll to the Ethernet screen. If the screen reads Ethernet Disabled, follow steps 3 through 5 to enable Ethernet capability. Otherwise, skip to step 6.
3. Press the center button to open the settings menu.

**Figure 6-24. Ethernet Configuration (1 of 4)**
4. See Figure 6-25. Use the up and down arrows to highlight Enable Ethernet then press the center button.

![Network Settings Menu](image1)

**Figure 6-25. Ethernet Configuration (2 of 4)**

**NOTE:** Select IP Settings for advanced settings.

5. See Figure 6-26. Press the right arrow to highlight Confirm then press the center button.

![Enable Ethernet](image2)

**Figure 6-26. Ethernet Configuration (3 of 4)**

6. Verify the control panel Internet LED is lit indicating a valid Internet connection.

**NOTE:** If the Internet LED is not lit, see Ethernet Troubleshooting.

7. The Generac PWRcell system is now Ethernet-enabled and can send and receive data.

**NOTE:** See Figure 6-27. The Ethernet screen on Generac PWRcell’s Inverter LCD displays IP address, MAC address and connection status.

![Network Settings Menu](image3)

**Figure 6-27. Ethernet Configuration (4 of 4)**

---

### Manually Configuring IP Settings

**NOTE:** On networks not configured for DHCP, use the MAC address to locate the device on the network.

To manually configure settings:

1. See Figure 6-28. Press the center button from the Ethernet settings screen and select IP Settings.

![Network Settings Menu](image4)

**Figure 6-28. Ethernet Configuration (1 of 2)**

2. See Figure 6-29. From the IP Settings menu select Manual.

![Network Settings Menu](image5)

**Figure 6-29. Ethernet Configuration (2 of 2)**

3. Adjust any of the following:
   - IP
   - Subnet Mask
   - DNS
   - Gateway

**NOTE:** Contact your network system administrator to connect the Generac PWRcell Inverter to a restricted network.
Ethernet Troubleshooting

**NOTE:** Use a laptop or other device to verify your Internet connection is working properly before troubleshooting.

For a successful connection the following must be valid:

- The Internet LED on the control panel must be lit.

**NOTE:** A lit Internet LED is a necessary, but not sufficient indication of a successful connection to the PWRview server. The blue LED may be lit even if the inverter is not connected to the server.

- A valid IP address must be displayed on the Ethernet settings page
- The PWRview State on the Ethernet settings page must read Listen.

**NOTE:** If the PWRview State reads Get Connected then a successful connection has not been made to the PWRview server.

If the inverter does not automatically connect to the network and begin communicating with the PWRview server, perform the following steps:

1. Verify an Ethernet connection has been enabled by pressing the center button on the Ethernet page and selecting Enable Ethernet.
2. Verify the network is configured for DHCP and that DHCP is enabled.
3. If the network is not configured for DHCP, obtain the MAC address and contact the system administrator for IP address assignment.
4. Input IP address under Manual settings. See *Serial Number and Registration*.
5. Restart router and modem.
6. Contact system administrator for further troubleshooting steps.

**NOTE:** It is the installer’s responsibility to make sure the Internet connection is reliable and secure. Generac recommends always using a hardwired connection. Generac does not recommend or support using any wireless or power line carrier network devices. Use these devices at your own discretion.

Serial Number and Registration

**NOTE:** If it is not possible to connect the system to the Internet, please call Generac Customer Service at 1-888-GENERAC (1-888-436-3722) to complete registration.

**NOTE:** Registering an inverter automatically registers all REbus system components connected to that inverter.

Every REbus-enabled device can be monitored from the PWRview™ online monitoring system and mobile app.

To register a system for PWRview monitoring:

1. See *Figure 6-30*. Locate the serial number and registration code on the registration decal on the front of the inverter. This information will be required for registration.
2. Navigate to [https://register.generac.com/](https://register.generac.com/) or if using a mobile device scan the registration label QR code.
3. Follow the on-screen prompts to complete the profile.

Section 7: Maintenance

Service

DANGER
Electrocution. Verify all system voltages are safe before wiring. Disconnect all AC and DC sources of power before touching terminals. Failure to ensure no dangerous voltages are present on conductors and terminals before wiring will result in death or serious injury.

DANGER
Electrocution. Initiate a system-wide safety shutdown and turn PWRcell Disconnect Switch OFF on all connected batteries before performing service. Failure to do so will result in death, serious injury, equipment and property damage.

For any servicing needs, contact the nearest Independent Authorized Service Dealer (IASD) or Generac Customer Service at 1-888-436-3722 (1-888-GENERAC), or visit www.generac.com.

Accessing Wiring Compartment

To access the wiring compartment:

1. Initiate a Safety Shutdown and allow DC voltage to drop to a safe level.
2. Power down inverter
3. Disconnect all sources of AC and DC Power.
4. See Figure. Open inverter front cover by lifting the bottom to horizontal (A) and pushing inward (B).
5. Locate wiring compartment cover (C).
6. Remove five M4X10 screws (D) and wiring compartment cover.

Replacing Fuses

WARNING
Equipment damage. Never replace a fuse with a different size or style. Doing so will void the inverter warranty and could result in equipment or property damage.

WARNING
Equipment damage. Never remove DC fuses under load. Removing DC fuses under load could result in equipment or property damage.

Two main fuses are installed between the power core and the DC breakers. See Generac PWRcell Inverter Wiring Compartment for location.

If a main fuse has blown, determine the root cause of the issue before replacing it. For assistance, contact the nearest Independent Authorized Service Dealer (IASD) or Generac Customer Service at 1-888-436-3722 (1-888-GENERAC), or visit www.generac.com.
To replace a fuse:

1. Initiate a Safety Shutdown and allow DC voltage to drop to a safe level.
2. Power down the inverter.
3. Disconnect all sources of AC and DC power.
4. Removing wiring compartment cover. See Accessing Wiring Compartment.
5. See Figure 7-2. Locate DC fuse holders (B)
6. Press fuse holder up and turn counterclockwise to release.
7. Remove fuse from fuse holder.
8. Insert replacement fuse into fuse holder.
9. Reinstall fuse holder. Turn clockwise until tight.

Recovery From an Error State

Error events will force Generac PWRcell Inverter into an error state where no DC power is exported, though voltage may still be present on REbus from connected devices.

To recover a device from an error state, use the front control panel to disable and then enable the device. If the system is unable to be accessed, but is connected to the Internet, contact Generac Technical support for assistance in resetting an error state.
Section 8: Troubleshooting

General Troubleshooting

Some of the more common problems are listed in the table below. This information is intended to be a check or verification that simple causes can be located and fixed. It does not cover all types of problems. Procedures that require in-depth knowledge or skills should be referred to an Independent Authorized Service Dealer.

Table 8-1. General Troubleshooting Guide

<table>
<thead>
<tr>
<th>Problem</th>
<th>Possible Cause</th>
<th>Solution</th>
</tr>
</thead>
<tbody>
<tr>
<td>System will not exit</td>
<td>Safety Shutdown</td>
<td></td>
</tr>
<tr>
<td></td>
<td>External shutdown button not depressed</td>
<td>Depress external shutdown button</td>
</tr>
<tr>
<td></td>
<td>No jumper between STOP terminals</td>
<td>Verify jumper is in place between STOP terminals.</td>
</tr>
<tr>
<td>CTs will not calibrate</td>
<td>Loose connection</td>
<td>Check CT wiring.</td>
</tr>
<tr>
<td></td>
<td></td>
<td>Power down inverter, allow screen to go blank, then power inverter ON.</td>
</tr>
<tr>
<td>No REbus Beacon device page</td>
<td>Beacon USB cable not connected</td>
<td>Verify Beacon USB cable is connected at both ends. Verify the USB cable is correctly connected to the Beacon and also to the Beacon accessory port in the inverter wiring compartment.</td>
</tr>
<tr>
<td></td>
<td>Beacon wrap-around cable not connected</td>
<td>Verify the short wrap-around cable is plugged into Beacon, from one port to the other.</td>
</tr>
<tr>
<td>Inverter isn’t connected to server</td>
<td>Inverter not connected to the Internet</td>
<td>Verify the inverter is connected to the Internet via a router.</td>
</tr>
